LABCORP TO INTRODUCE COMBINED ONCOLOGY OFFERING AT 2021 ASCO® ANNUAL MEETING

Presentation Features Labcorp’s Combined Oncology Diagnostic and Drug Development Platform for Clinicians and Biopharmaceutical Companies

BURLINGTON, N.C., June 2, 2021 — Labcorp (NYSE: LH), a leading global life sciences company, today announced the introduction of its combined Labcorp oncology platform at the virtual 2021 American Society of Clinical Oncology (ASCO®) Annual Meeting held June 4-8.

Labcorp’s oncology platform brings together the company’s leadership in diagnostic testing with its comprehensive drug development services, delivering targeted solutions for oncology by leveraging breakthrough science and insights from clinical and patient data to power better decisions and improved patient outcomes. Labcorp’s highly trained and specialized oncology team is led by Prasanth Reddy, M.D., MPH, a triple-board certified oncologist, and includes Robert Phillips, Ph.D., vice president and head of enterprise oncology.

“Advances in science have led to promising cancer-related discoveries, yet there is much more to do to in the field of oncology to find better treatments and improve lives,” said Phillips. “Labcorp has a history of developing best-in-class diagnostics and drug development solutions that can help accelerate new therapy options for cancer patients. We are able to empower better decisions and make precision medicine available to more cancer patients by expanding access to diagnostic testing and clinical trial opportunities across communities.”

Phillips will speak as part of the Industry Expert Theater¹ on Monday, June 7, from 10-10:40 a.m. EDT. His presentation, *Reimagining Precision Medicine Throughout a Patient’s Journey*, will introduce the Labcorp oncology platform and highlight new, expanded testing and trial options. Immediately following the presentation, Phillips will be conducting a live audience Q&A session. Attendees will also have on-

demand access to the presentation for the duration of the conference. Labcorp's online exhibit for the ASCO Annual Meeting is available 24/7 between Friday, May 14, and Tuesday, July 6. The exhibit aims to educate attendees on testing options offered by Labcorp, as well as the wide-ranging support the company provides for oncology clinical trials. Attendees will be able to leave a virtual business card at the exhibit page to connect with Labcorp. To access the online exhibit and Dr. Phillips' presentation, and to learn more about the conference, please visit <https://conferences.asco.org/am/attend>.

Labcorp's comprehensive oncology test menu to be discussed at the ASCO Annual Meeting includes the commercial introduction of OmniSeq® INSIGHT—a pan-cancer, tissue-based sequencing test for patients with late-stage solid tumor cancers. The test helps physicians make decisions about therapeutic treatments and identify patients who may be eligible for any of several thousand ongoing clinical trials.

Labcorp also intends to highlight IntelliGEN® Myeloid and liquid biopsy testing for lung cancer. IntelliGEN® Myeloid is a next-generation sequencing (NGS) assay that evaluates 50 genes known to be useful in providing diagnostic, prognostic and predictive information for patients with myeloid malignancies. Liquid biopsy testing examines a blood sample for cancer cells, or pieces of DNA from a tumor circulating in the blood, in order to identify mutations and help select the most effective, targeted treatments. It is an increasingly viable, non-invasive testing option in cases where obtaining a tissue sample may be difficult or risky.

Labcorp Drug Development will contribute two online abstracts to the scientific program—e18608: “Mortality in adult patients with solid or hematological cancers and SARS-CoV-2 infection with a specific focus on lung and breast malignancies: A systematic review and meta-analysis,” and e13584: “The role of digital clinical measures in improving cancer care and research.”

Labcorp has also made a donation to Conquer Cancer®, the ASCO foundation dedicated to conquering cancer throughout the world by funding breakthrough research and sharing cutting-edge knowledge.
